# ECLIPSE

PREMIUM SERIES

A product has never been more aptly named...Trimline's Eclipse<sup>2</sup> double hung truly does "surpass and outshine" it's competition with a look that's out of this world. The richly appointed Eclipse<sup>2</sup> double hung has the look and feel of wood windows from a by gone era. The Eclipse<sup>2</sup> blends the ageless style and warmth of a wood interior with the convenience of E-Z tilt sash, a maintenance free aluminum clad exterior and the energy efficiency you'd expect to find in today's windows. The Eclipse<sup>2</sup> double hung features standard combination tilt-lock hardware that is available in a choice of four finishes. Both sash travel in a concealed track system designed to preserve a more authentic looking wood sash pocket, reminiscent of a look and feel from a time ago. Elegantly styled sash lifts or routed finger lifts complete the hardware appointments. All models are furnished standard in pine with Trimline's insulating glass system with EnerEDGE<sup>®</sup> warm-edge spacer and argon gas.

## CONCEALED JAMBLINER

## CONCEALED TILT-LOCK MECHANISM

The Eclipse<sup>2</sup> features a combination tilt-lock system, where the tilt mechanism is activated by the lock and is concealed within the lock rail, eliminating the need for surface mount tilt release latches for a neat, clean appearance.

DHC350 (EC300) SHOWN IN BEIGE WITH OPTIONAL 3 ½" WILLIAMSBURG EXTERIOR CASING, 1 ¾" HISTORIC SILL AND ⅝" SDL GRILLE.

## CLAD PRODUCTS

**DHC250 (EC200)** - Clad double hung with 3 ¼" replacement frame for sash pocket installations from the interior.

**DPC250 (EC200PW)** - Use as stand alone picture window or companion picture window with matching sight lines for combination with DHC250 units.

**DHC350 (EC300)** - Clad double hung with full 4 ⅝" jamb for remodeling applications where a complete frame tear-out is required or for new construction with nail fin installation, or sash pocket installation from the exterior.

**DPC350 (EC300PW)** - Use as stand alone picture window or companion picture window with matching sight lines for combinations with DHC350 units.

**DTC350 (EC300TR)** - A transom window to be factory mulled with a DHC350.

INTERIOR WOOD CAN BE FACTORY PRIMED, PREFINISHED WHITE, OR PREFINISHED A CUSTOM COLOR. INTERIOR CAN ALSO BE LEFT UNFINISHED FOR STAINING.

ENJOY THE BEAUTY  
OF WOOD...  
WITH A MAINTENANCE-FREE  
CLAD EXTERIOR.

The insulating qualities of wood provides a positive thermal break and can be painted or stained, while the weather resistant aluminum clad exterior provides years of maintenance-free durability.

## ACCESSORY EXTERIOR CASING & PANNING SYSTEMS

The DHC350 (EC300) is designed for both residential and commercial remodeling applications where a full frame replacement is required or for sash pocket installations where an extruded aluminum panning system can be used to cover the old window casings. The DHC350 (EC300) is also ideal for use in renovations where the old window has been completely removed, and an accessory brickmoulding is required to fill the void left from the old window casings. Custom designed exterior casing and panning profiles are available.

CUSTOM PROFILES AVAILABLE

## CLAD ANGLE BAY WINDOWS

Angle bays are available with either picture window or double hung centers which can be arranged in a variety of combinations by choosing from four different flanker widths and with 30° or 45° degree mullion angles. Available in pine or oak interior.

## BAY WINDOW PROJECTIONS

The projection of a custom bay window is the measurement taken from the outside face of the exterior building sheathing to the furthest outside point of the window. It is determined by the mullion angle and the flanker width specified as shown in the angle bay projection guide below. The size of the center unit is also determined by mullion angle and flanker width. It is determined by subtracting the total flanker allowance (flanker allowance x 2) from the overall unit opening with.

ANGLE BAY GUIDE			
ANGLE	FLANKER WIDTH	TOTAL FLANKER ALLOWANCE	PROJECTION
30°	1'5"	35"	10-3/8"
	1'8"	40-1/4"	11-7/8"
	2'0"	47-1/8"	13-7/8"
	2'4"	54-1/8"	15-7/8"
45°	1'5"	31-3/4"	14-3/4"
	1'8"	36-1/8"	16-7/8"
	2'0"	41-3/4"	19-3/4"
	2'0"	47-1/2"	22-1/2"

## COMBINATION UNITS

## WOOD PRODUCTS

**DHW250 (EW200)** - Wood double hung with 4 5/8" - 5 1/8" replacement frame for sash pocket installations from the interior.

**DPW250 (EPW200)** - Use as stand alone picture window or companion picture window with matching sight lines for combination with DHW250 units.

**DTW250 (EW200TR)**- A transom window to be factory mulled with a DHW250.

**DHW350 (EW300)** - Wood double hung with full 4 9/16" jamb for remodeling applications where a complete frame tear-out is required or for new construction with nail fin installation.

**DPW350 (EPW300)** - Use as stand alone picture window or companion picture window with matching sight lines for combinations with DHW350 units.

**DTW350 (EW300TR)**- A transom window to be factory mulled with a DHW350.

# FREEDOM FRAME

## OPTIONAL NO-ROT CPVC

Trimline's no-rot "Freedom Frame System" is made from cPVC (cellular polyvinyl chloride) which is a type of rigid plastic foam material that has been engineered to imitate the properties of wood. It not only mimics most of wood's virtues but also gives you the "Freedom" from the maintenance that the exterior of a wood window frame routinely requires. The material can be cut, milled, nailed, screwed, shaped, routed and bent but unlike wood it is nonporous and will not warp, cup, twist, split, check or rot. The design and dimensions of the profiles used in the Freedom Frame system successfully achieves the classic look and feel of a traditional wood window frame. You can further compliment the character of the window and your home by selecting from your choice of 12 exterior brickmould styles which are available with each and every style, shape, and size of the Eclipse<sup>2</sup> series window. Further enhancing the traditional wood window look is the Freedom Frame's ultra smooth, moisture repellent surface which is pre-primed ready for acceptance of your finish coat or your Eclipse<sup>2</sup> window can be ordered prefinished with a high quality factory applied finish in virtually any color. The ability to bend and shape cPVC enable its use in a variety of processes and applications...and like wood, it can be cut, nailed, shaped, routed and bent.

## WOOD

All wood components are milled to precision and treated with a wood preservative and are paintable or stainable to match your existing woodwork and room decor. All exterior wood parts are factory primed.

## CLADDING

For standard colors, the extruded aluminum frame is a spray applied PPG Polycron III finish meeting the physical test requirements of AAMA 2603. Standard colors are also available in optional 2605 finishes. The roll formed sash cladding is a reverse roll-coat system using 70% Kynar resin, meeting the physical test requirements of AAMA 2605. All custom colors meet the physical test requirements of AAMA 2605.

## PRE FINISHING

Trimline utilizes a high-performamance Sherwin-Williams product, Kem Aqua BP Enamel, a low-VOC polyurethane-acrylic enamel topcoat developed specifically for in-shop finishing of windows. Kem Aqua BP Enamel provides excellent adhesion on both wood and cPVC composites, with exceptional long-term exterior durability. Kem Aqua BP Enamel's unique resin technology provides excellent color and gloss retention so colors keep their original depth and gloss longer, meeting the strict requirements of both the American Architectural Manufacturers Association (AAMA) as well as the Window and Door Manufacturers Association (WDMA). A wide range of color options makes it easy to achieve clean whites, popular earth tones, and rich, customs colors...virtually any custom color can be matched.

At the heart of Trimline's prefinishing process is the Prime Heat Hal-Con curing tunnel which uses halogen short wave heating elements to convert electrical energy into shortwave infrared, which penetrates deeper and faster into the finish coating, promoting a more durable and consistently smoother finish by curing from the inside out.

## FINISHING OPTIONS

	INTERIOR		EXTERIOR

CUSTOM TWO-TONE FINISHES AVAILABLE

## FLAT IN-GLASS ALUMINUM

Maintenance-free  $\frac{5}{8}$ " between the glass flat aluminum muntin in matching exterior cladding color. Also available in diamond lite patterns. Two-tone inglass grids are not available.

## SCULPTURED IN-GLASS ALUMINUM

Maintenance-free  $\frac{3}{4}$ " between the glass sculptured aluminum muntin in matching exterior cladding color. Two-tone inglass grids are not available.

## WOOD REMOVABLE

Wooden removable interior grille available in  $\frac{5}{8}$ " or  $\frac{7}{8}$ " w/ clear plastic clips.

## SIMULATED DIVIDED LITE

An authentic "putty glaze" look is achieved with the simulated divided lite (SDL) grille package in either  $\frac{5}{8}$ " or  $\frac{7}{8}$ " widths. The standard SDL system included permanently applied exterior aluminum/wood/cPVC muntins with the choice of removable or permanently applied wooden interior grilles. Also available with optional in-glass bronze spacer bar as shown.

## TRUE DIVIDED LITE

Divides sash into individual panes of glass.

## WOCD

An optional Window Operating Control Device is available on all double hung products and serves as a safety feature to only allow the bottom sash to open less than 4 inches when activated, meeting the specifications of ASTM F29090-10 .

# FEATURES & BENEFITS

## REMODELING OR NEW CONSTRUCTION

DHC350 / DHW350 (EC300 / EW300)

- For new openings or remodeling installations requiring complete frame tear-out
- Standard 4  $\frac{9}{16}$ " jamb depth
- Applied extension jambs up to 7  $\frac{1}{2}$ "
- Factoring mulling with historic spread mull options
- Choice of factory applied exterior casings
- Optional 1  $\frac{3}{4}$ " historic sill nose
- Optional snap-in pre-slotted hinged vinyl installation flange (DHC350)
- Factory mulling with continuous sill up to 12' on EW300

## POCKET INSERT

DHC250 / DHW250 (EC200 / EW200)

### DHC250 (EC200)

- 3  $\frac{1}{4}$ " stepped jamb for sash pocket insert installation from the interior
- Frame thickness is  $\frac{11}{16}$ " at jamb and head
- Overall sash thickness 1  $\frac{7}{16}$ "

### DHW250 (EW200)

- Jamb depth of 4  $\frac{9}{16}$ " with optional screen stop: 5  $\frac{1}{16}$ "
- Overall sash thickness of 1  $\frac{1}{2}$ "
- Sill is  $\frac{1}{2}$ " thick on a 9 degree angle and is designed for a sash pocket insert installation from the exterior (existing blind stop may need to be trimmed)
- Exterior window height is  $\frac{1}{16}$ " greater than interior height

ALL WOOD

DHW250 / DHW350 (EW200 / EW300)

- Blindstop, Simulated Divided Light, Sill and optional Screen stop are manufactured from western pine or sapele (optional cPVC available)
- Optional No-rot cPVC Freedom Frame
- Twelve no-rot cPVC brickmould styles to choose from or custom profiles
- Snap-fit brickmould profiles available
- Freedom Freedom accepts snap-in folding nail-flange

CLAD

DHC250 / DHC350 (EC200 / EC300)

- The insulating qualities of wood provides a positive thermal break and can be painted or stained while the weather resistant aluminum clad exterior provides years of maintenance free durability.
- All frame exterior parts are of .060 maintenance-free extruded aluminum and mitered corners are silicone filled and tightly joined mechanically with concealed corner key.
- A thermally broken tri-plex sill system of wood, extruded aluminum and vinyl is mechanically fastened, gasket and silicone sealed to the jamb
- For standard colors, the extruded aluminum is spray applied PPG Polycron III finish meeting the physical test requirements of AAMA 2603. The roll formed sash cladding is a reverse roll-coat system using 70% Kynar resin, meeting the physical test requirements of AAMA 2605.
- All custom colors meet the physical test requirements of AAMA 2605.

# PERFORMANCE

**U-Factor** measures how well a product prevents heat from escaping a home or building. U-Factor ratings generally fall between 0.20 and 1.20. The lower the U-Factor, the better a product is at keeping heat in.

**Solar Heat Gain Coefficient (SHGC)** measures how well a product blocks heat from the sun. SHGC is expressed as a number between 0 and 1. The lower the SHGC the better the product is at blocking unwanted heat gain. This is especially important during the summer cooling season.

**Visible Transmittance (VT)** measures how much light comes through a product. The higher the VT the higher the potential for day lighting.

The rate of heat loss through a window is determined by the U-Factor (U-Value). The lower the U-Value number, the better the insulating properties. In the same spectrum, the better the insulating properties, the more money will be saved on heating and cooling costs. When windows account for almost one quarter of household energy, investing in a Trimline window is the perfect solution.

**Warm Edge** refers to the type of spacer material used to separate the panes of glass in an insulating unit. Many of today's energy efficient windows offer glass packages touting "Warm Edge Technology"... the problem is, these new windows often use thermally conductive metal-based spacers in their insulating glass systems.

#### Homeowner Benefits

- Increased comfort - any climate, any season.
- Reduced heating and cooling bills.
- Protection from UV rays that can fade carpet, walls and furniture.
- Color- neutral for crisp, clear views.
- Helps keep indoor humidity at comfortable and healthy levels by keeping glass warmer, which in turn minimizes health issues caused from mold and mildew.
- Warm-edge spacer virtually eliminates condensation
- Helps homes stay cooler in the summer & warmer in the winter.
- When combined with double strength glass EnerEDGE substantially reduces noise.

For more than 50 years, Trimline has provided quality custom windows for use in replacement, remodeling, new construction and historically certified rehabilitation projects. Trimline offers a wide variety of products including double hung, casement, bow, bay, awning, picture windows, and sash replacement kits, as well as round top, elliptical and other architectural window products.

Custom colors in either all wood or aluminum clad exteriors and interior hardwoods of oak, cherry, and sapele are available. Custom extruded panning systems and other trim accessories plus, a variety of simulated divided light as well as authentic true divided lite profiles, and replication of mullion details are some of our custom capabilities.
